

Vanliners: making work life easier from concept to reality

WITH over 20 years of experience Vanliners prides itself on its unparalleled customer service and after care support. Its knowledge and experience has helped it gain nationwide recognition resulting in a high level of customer satisfaction. Gaining this level of fulfilment has enabled the company to attract a substantial amount of Essential Service Fleets, along with a steady rise in the turnover of other large fleet operators.

With the ability to store in excess of 500 vehicles across its sites, Vanliners is able to house even the largest of fleets. The company would not be able to accommodate all these expansive fleets without having numerous accreditations including, most recently, the new standard ISO 9001:2015. Its accreditations enable them to work on various types of vehicles, registered and non-registered.

Behind the scenes, helping Vanliners gain its high level of customer satisfaction, is a dedicated team of engineers and electricians, whose level of experience surpasses many in the industry. Their adaptive thinking and superior work ethic enables Vanliners to complete various conversions to a consistently high standard. This includes the trial and testing of products before they are installed into a vehicle.

Vanliners is a Bolton-based business and is accessible to many North West-based organisations, however because of its highly skilled technicians, it is also able to offer a nationwide mobile service meaning it can carry out a large number of its services at customers' own premises – minimising costly vehicle movements and unnecessary down time of employees.

From concept to reality Vanliners offers a bespoke service starting from an initial enquiry right the way through to the

completed conversion. Its experienced sales team has vast knowledge within the industry and can help with even the most intricate of enquiries. Vanliners also offers a free design and development service; bespoke to all kinds of needs including dimensions and weights and a 360-degree view.

Vanliners aims to offer all its customers the best possible service and to achieve this it must always provide the technology that benefits every type of customer. It is constantly updating its brochures with new products so it offers the best possible services.

Vanliners is commonly associated with ply lining kits and plywood shelving but in actual fact it offers a whole range of vehicle specific products starting from A-Z. The company provides vehicle security, internal and external glass-carrying systems, towbars and steps, lighting and power supply options, crash tested modular shelving and storage solutions, speed lining and GRP spray linings. It also offers a wide and expansive range of roof mounted accessory options starting from roof bars and rollers to easy ladder loaders and roof ventilation.

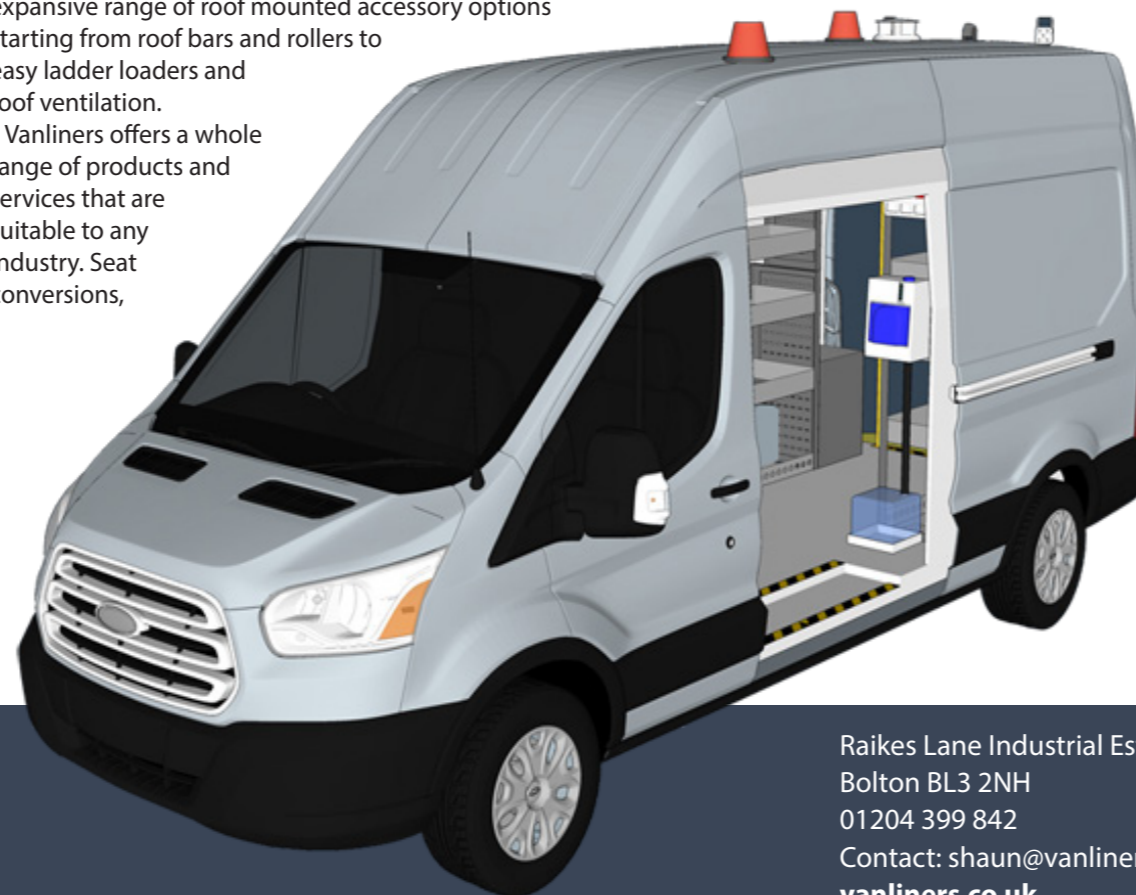

Vanliners offers a whole range of products and services that are suitable to any industry. Seat conversions,

maintenance vehicles, utility vans; it can facilitate any need. The in-house design team can also assist customers with any livery and chevron queries that arise, providing peace of mind that their whole fleet needs are taken care of all under one roof.

Vanliners is always researching new designs and new products to stay ahead of the game within the industry. Currently within the sector weight is an ongoing discussion between fleet managers.

How to reduce the overall weight of a fully laden vehicle? Thankfully Vanliners has come up with the answer with its new VL-Systems lightweight shelving system. Constructed of Plas-Dec shelves and a powder coated steel frame it offers the ultimate strength of crash tested modular shelving with the lightweight savings of aluminium shelving.

THERE ARE MANY BENEFITS OF VL-SYSTEMS SHELVING:

- Fully contoured to the shape of the vehicle, meaning that the whole load area is utilised.
- Each shelf is designed to follow the vehicles natural contour removing any unnecessary wasted space behind shelves as seen with modular shelving.
- VL-Systems shelving is on average 25% Lighter by direct comparison with the modular steel shelving units.
- VL-Systems shelving is much easier to manage as its easy clean and durable giving it the advantage over modular steel.
- With its honeycombed interior design, VL-Systems shelving gives you the advantageous benefit of an 11mm thickness giving it a rigid stance in comparison to the 3mm steel of modular shelving.

Testimonial

BY PETER HARRIS, STOCKPORT HOMES

Stockport Homes has used Vanliners to carry out conversions to their new repairs fleet of 60 vehicles which included internal racking, lining, roof racks and ladder loaders amongst a host of other things. Vanliners were superb in making the conversion process run smoothly with no delays in completing the work to each vehicle as scheduled. All the work was completed to an excellent standard and everything they did was organised and timely.

Vanliners helped us with the designs for the racking and were good at keeping the costs down wherever possible so that value for money was achieved. In particular, all the staff we dealt with, from shop floor to management, were prompt and very flexible when dealing with any queries we raised or changes to plan or design – nothing really was too much trouble for them. They offered good advice throughout the process and were always available to help sort out any issues we had. Moreover, they offered us the use of their site as a collection point for our old fleet and helped administrate the hand-back process when the vehicles were picked up. They also made their site available to us for the livery process to be completed by another company.

Overall, a great job was completed for us by Vanliners and I would have no hesitation in thoroughly recommending them to other companies requiring fleet conversions.
